

## WORKSHOP ABOUT CONSERVATION OF DRY GRASSLANDS

On 21 January 2016 DINPD organised a successful workshop in Domonyvölgy for professionals working at Hungarian national park directorates and researchers working on *Conservation of dry grasslands in Central Hungary* LIFE+ Nature project.

Lectures were held about botanical and zoological aspects of the endangering factors of the wildlife of these grasslands, also aiming at finding solution to eliminate these problems and conserve and restore dry grasslands.

See the list of lectures hereunder.

- **András Schmotzer:** Restoration of highland grasslands in the Bükk National Park Directorate
- **Szilvia Rév:** Experience in habitat restoration (elimination of invasives) in Csévharasti Borókás Nature Conservation Area
- **Balázs Deák:** Grassing with species-poor and species-rich seed mixtures – advantages and disadvantages
- **Orsolya Valkó:** Grassland reconstruction with laying hay – Hungarian and international experience
- **Dániel Babai:** Traditional treatment of highland grasslands (Eastern Carpathians, Gyimes)
- **Csaba Szinetár:** Results of monitoring of soil surface spiders on grassland restoration areas of the 'Pannonic sand land habitats in military owned area of the Hungarian Little Plain' LIFE project
- **Ottó Merkl:** Bugas and grasslands
- **Béla Tallósi:** Composition and changes of soil surface arthropoda communities in the Pásztó pasture and neighbouring grasslands
- **Attila Pál – Gergely Petrányi:** Dry grassland treatment aiming the conservation of Lepidoptera
- **János György Nagy:** Sandy grasslands of the Jászság
